1. Location: See 25X1A

2. Work force: About 500 per shift, more than 50 percent of them women. The number of shifts was not known. German engineers were employed at the plant. had spoken with the told source that they were from BERLIN. German women were also employed at the plant. No details available.

3. Miscellaneous observations:

The casting of aluminum frames for 20x12x24 inch casings was observed in the aluminum foundry. The frame had an angular profile and was provided with various bridges and sockets. On the ground floor of one building source observed through the window a machine over which ran a tin foil and a strip of yellow oil paper. He believed that preparatory work for the production of block type condensers was done there. According to Soviets, radio sets for the armed forces are produced in the plant.

4. Raw materials:

Source observed the arrival by truck of 16x8x32 inch aluminum ingots. Nickel sheets and plates were seen stored in a storage shed. These plates were 16x4 inches in size and were from 1 to 10 mm thick. Copper tubes and copper rods up to 10 mm in diameter, brass tubes and brass rods up to 40 mm in diameter and very thin tin foils, about 40 inches wide and in rolls, were also seen in this shed.

A dump of old radio sets and individual parts was located in the yard.

5. Security measures:

The plant was guarded by civilian guards armed with rifles. The production shops were off limits
